

LIBERATOR™
DUST COLLECTORS

Pulse-Jet Walk-in Plenum

Standard Pulse Jet Bag Houses

For applications requiring 1,244 to 4,701 ft² of cloth area per unit with 10' or 12' long filter bags.

Features like our exclusive *Filter Fit System*_i have been developed to provide a positive mechanical-assist seal at the tube sheet in all of our **LIBERATOR** bag house collectors.

An exacting, reinforced venturi and rolled bottom cup cage are stabilized to provide superior support ensuring a focused, efficient pulse for accurate filter clean down and performance where it counts the most.

Additional Standard Features

- Typically ships as a pre-assembled single unit from the factory. Field assembly and install costs are reduced.
- Modular design for application and volume flexibility.
- Snap-in filter tube sheet design.
- Welded 10 ga. carbon steel construction.
- Operating temperatures to 275 °F.

Benefits of Walk-in Plenums

- Bags can be changed and the unit maintained from the clean side of the collector housing. Operators are not in direct contact with toxic or valuable collected product.
- The collector system can be located outside, not taking up prime production floor space.
- Reclaimed product is protected from rain and snow during maintenance and inspections.
- Emergency filter change-outs performed quickly regardless of the weather, making the walk-in plenum collector suitable for critical operations requiring minimal down time.

Comes Complete With:

- 100% Polyester filters with double beaded stainless steel snap band.
- Rugged 12 wire filter support cages with reinforced integral venturi.
- Double diaphragm pulse valves and compressed air manifold system with NEMA 4 solenoid pilot valve enclosures.
- Programmable solid-state timer controls in a NEMA 4 enclosure. Pre-wired and set-up for continuous cleaning.
- Caged ladder and access platform designed to meet OSHA safety requirements.
- Structural steel support.
- Primed and painted with industrial grade enamel.

Options

- NEMA 7 or 9 controls for potentially explosive environments.
- Stainless steel construction for corrosive applications.
- Aramid, P84 (Polymide), PTFE Membrane, 100% White Teflon, Polypropylene, Fiber Glass and other filter medias.
- 500°F operating temperature configurations.
- Explosion panels.
- Custom discharge height.
- Pressure readout gage.
- Rotary valve or other specified discharge equipment.
- Clean on demand controller.
- System engineering and install services available.
