

SCHUST
A MEMBER OF THE SCHEUCH GROUP

YOUR VENTILATION PARTNER

3 STEPS TO CONSIDER

When your plant facility is affected by respirable crystalline silica emission exposures, it is important to determine that your ventilation systems are operating as intended. Schust will work in conjunction with your industrial hygienist and IH audits to design a system that reduces worker's silica exposure.

Visit Schust online to read project profiles and see how other facilities are tackling harmful emission exposures.

Schust.com

STEP ONE

INSPECTION

Schust provides general maintenance and inspection services that maximize your ventilation systems.

STEP TWO

PLANT VENTILATION AUDIT

Knowing how your plant ventilation systems are operating gives plant managers and employees the insight and confidence needed to make responsible adjustments and repairs.

STEP THREE

ENGINEERING STUDY

The Schust expert team understands that operations change. We review plant ventilation audit data to recommend system adjustments or new designs that will support your ventilation goals.
